

# **GLOBAL LAW FIRM RESOLVES FIRM-WIDE BOTTLENECK AND INCREASES BUSINESS EFFICIENCY**

# Business Challenge

A prestigious global law firm in the United States needed to overcome the various challenges associated with handling high volumes of documents. They were using batch processing with a competing OCR product that limited the processing of documents to one at a time. The firm needed to expedite converting paper into electronic format in order to meet their business requirements. The firm sought to find a solution that would cover all bases. They required a solution that could process high volumes at a high speed. The solution needed to be a server based product with improved OCR throughput. It was also important for the solution to scan image-based PDFs in bulk and split the PDFs through barcode recognition. Lastly, the firm needed these PDFs to be text searchable for distribution to departments.

# Solution

The firm licensed Foxit Software’s PDF Compressor to improve OCR throughput on scanned documents. They were also looking to increase the speed of processing paper and electronic copies of documents and send them to the appropriate departments within the firm. PDF Compressor was used to make the documents fully optimized by making them text-searchable. Foxit’s solutions were able to process the firm’s high-volume at a high speed, while improving OCR throughput.

# Results

The speed of processing the firm’s documents is dramatically faster with PDF Compressor’s OCR and compression. Additionally, employees are much more efficient because they are spending less time focusing on feeding the documents into a scanner, and focusing on other value-added tasks. Image documents are reliably made text-searchable with PDF Compressor’s highly accurate OCR technology. The entire process is automated and reduces the firm’s costs, while making workflows more efficient.

# Benefits

Objective	Benefits Achieved
▶ Identify a solution built for high-volume processing	✔ Batch processing allows the firm to process documents at high speed, making business processes more efficient
▶ Create more efficient workflows for the firm	✔ Automating and increasing the speed of processing documents enables the firm to reduce the time employees spend feeding documents one by one into a scanner and can
▶ Transform image-based documents into high-quality, text searchable files with improved OCR throughput	✔ Using PDF Compressor, the firm converted image-based PDFs into highly accurate text searchable documents
▶ Increase the speed of processing documents	✔ By leveraging Foxit’s multi-threaded capabilities, the firm was able to process multiple documents concurrently, at a rate of one document at a time, per core
